Energizer® Hard Case® Tactical™ Helmet Light

With 10 patents pending, the innovative Energizer® Hard Case® Tactical™ Helmet Light (MSRP \$85) features a compact design and waterproof casing. The Helmet Light is lightweight, weighing only 3.5 ounces, including one AA Energizer® Ultimate Lithium battery as well as the helmet mount. The light uses cutting edge LED technology and comes equipped with four lighting modes to easily adjust to the various lighting conditions that soldiers can face:

- High-intensity white (three varying intensities)
- Blue for light-discipline and medical applications (three varying intensities)
- Infrared (IR) for use with night-vision devices (880 nanometer rating)
- Strobing IR for Identify Friend or Foe capability (IFF – blink rate of two-per-second)

The versatile Helmet Light can be mounted on either side of a helmet and does not protrude below the rim, allowing the helmet to lay flat when not being worn. Once affixed to a helmet, the light can be rotated in 18-degree increments and locked into place to direct light where it's needed. The Helmet Light also detaches easily from the mount for use with other accessories such as a MOLLE vest or Pickatiny system.
