

## Rapid Deployment with Exclusive Warrior Wear™ Side-Zip Boots

### BLACKHAWK!® has released an exclusive desert tan version of the Warrior Wear™ ZW5 & ZW7 Waterproof, Side-Zip Boots.

Perfect for those who require lightning fast response, the ZW series utilize a molded, zipper opening with durable hardware so you don't have to tie and retie the laces. Tie the boots once and use the side-zip to quickly don in seconds!

Internally, a waterproof Sympatex® liner surrounds the boot and even runs the length of the zipper gusset. A Dri-Lex® lining aids in wicking moisture away from the foot and quickly dries. The ZW series has a removable, anti-microbial Ortholite® footbed that is washable to prevent odor

causing bacteria.

In addition to the internal waterproof barrier, the outer Cordura® and high abrasion suede leather is also water resistant. The outsole includes an oil-resistant Vibram® TC4+ material with large open lugs for traversing debris and providing excellent traction on irregular or wet surfaces. Other features include a padded collar for comfort and ankle support, convenient nylon pull-on loop and rubber kicker material for increased toe protection.

These new lightweight boots are available in two heights: 5-inch (ZW5) or 7-inch (ZW7). The ZW series is offered in two colors: black or desert tan.

## Tru Combat Shirt Designed for Tactical Operators

TRU Combat Shirt reduces the severity of burn injuries, integrates well with body armor and is lighter and more comfortable to wear in hot and humid environments.

Tactical response team members and military personnel have two main issues integrating body armor with their uniform. First, main uniform pockets become covered and unavailable. Second, heavy body armor combined with a uniform top and a base layer create an unbearably hot environment. The Combat Shirt concept improves the design of the tactical uniform by:

- reclaiming cargo pockets and placing them on the sleeves in a more practical arrangement
- reducing weight by eliminating excess uniform material and need for separate base layer
- creating a comfortable, durable and naturally thermal resistant body that also wicks moisture.

The body of the TRU Combat Shirt is made from Cordura® brand Baselayer. This 60/40 cotton/nylon blend insulates the

body when exposed to high temperatures and will not drip or melt onto the skin like polyester. Cordura® adds tough-as-nails durability needed to minimize tears and other abrasions. The TRU Combat Shirt is available in ACU Digital and MULTICAM® with 50/50 cotton/nylon rip-stop blend sleeves. Black, khaki and olive drab are available with 65/35 poly/cotton rip-stop sleeves. All colors are available in small through 2XL.

## L-3's New Thermal-Eye Renegade Imager

L-3's New Thermal-Eye Renegade-320 Delivers a Multi-Purpose Thermal Imager for force protection, border patrol officers, and Special Operations Forces.

The system provides six hours of operation on four CR123 batteries. It also offers five reticles, an optional laser, and an image capture feature that stores 200 pictures. The camera interface cable allows operators to connect to external power, view the scene on a monitor and download images to a computer through a USB connection.

The Thermal-Eye® Renegade-320 kits contain: Renegade-320 system with choice of lens (FOV 50°, 25°, 12°); two eye pieces; protective carrying case; four CR123 lithium batteries; neck lanyard and hand strap; lens cover; lens cleaning cloth; tripod mount; camera interface cable.

Optional equipment: laser pointer (infrared and visible); 5/8" Picatinny Rail Riser; a see-through Picatinny Rail Riser.
